

CS1632, Lecture 4: Test Plans and TM

Wonsun Ahn

You've got requirements.
You're looking for defects.

How?

Develop a test plan!

Formality

- This could be as formal or informal as necessary.
- Think about what you are testing – what level of responsibility / tracking is necessary?

What are you testing?

- Throw-away script?
- Development tool?
- Internal website?
- Enterprise software?
- Commercial software?
- Operating system?
- Avionics software?

Testing is context-dependent

- How you test
- How much you test
- What tools you use
- What documentation you provide
- ...All vary based on software context.

Formal Test Plans

- A test plan is a sequence of test cases.
- A test case is the fundamental “unit” of a test plan.

A test case mainly consists of...

- Preconditions: State of the system before testing
 - Environment / global variable values, ...
 - Pending user input or network packet, ...
- Execution Steps: Steps to obtain postconditions
- Postconditions: State of the system after testing
 - Environment / global variables are set, ...
 - Output printed to screen, network packet sent, ...

See IEEE 829, "Standard for Software Test Documentation", for more details

Example

Assuming an empty shopping cart, when I click "Buy Widget", the number of widgets in the shopping cart becomes one.

Preconditions: Empty shopping cart

Execution Steps: Click "Buy Widget"

Postconditions: Shopping cart displays one widget

We also want to add:

- Identifier: A way to identify the test case
 - Could be a number
 - Often a label, e.g. INVALID-PASSWORD-THREE-TIMES-TEST
- Test Case: A description of the test case

If doing method unit testing, we also add

- Input values: Values passed as method arguments
- Output values: Value(s) returned from method
- Difference between input value and precondition?
 - Arguments passed directly to the method are input values
 - A global variable set before method is called is a precondition
 - User input entered before method is called is a precondition

In full, a test case contains the following items

- Identifier
- Test Case
- Preconditions
- Input Values
- Execution Steps
- Output Values
- Postconditions

See IEEE 829, "Standard for Software Test Documentation", for more details

Example

Assuming that the SORT_ASCENDING flag is set, calling the sort method with [9,3,4,2] will return a new array sorted from high to low, i.e., [2,3,4,9].

Precondition: SORT_ASCENDING flag is set

Input values: Array [9,3,4,2]

Execution steps: Call sort method with input values

Output values: Array [2,3,4,9]

Postconditions: None

Test Plan

- A collection of test cases for testing a system
- These do not always test an entire system
- They may test a subsystem or related piece of functionality
 - Examples:
 - Database Connectivity Test Plan
 - Pop-up Warning Test Plan
 - Pressure Safety Lock Test Plan
 - Regression Test Plan

Pressure Safety Lock Test Plan

LOW-PRESSURE-TEST

HIGH-PRESSURE-TEST

SAFETY-LIGHT-TEST

SAFETY-LIGHT-OFF-TEST

RESET-SWITCH-TEST

RESET-SWITCH2-TEST

FAST-MOVEMENT-TEST

RAPID-CHANGE-TEST

GRADUAL-CHANGE-TEST

MEDIAN-PRESSURE-TEST

LIGHT-FAILURE-TEST

SENSOR-FAILURE-TEST

SENSOR-INVALID-TEST

A group of test plans make up a test suite...

- Regression Test Suite
 - Pressure Safety Regression Test Plan
 - Power Regulation Regression Test Plan
 - Water Flow Regression Test Plan
 - Control Flow Test Plan
 - Security Regression Test Plan
 - Secondary Safety Process Test Plan

Test Run – Actual execution

- Test run: An actual execution of a test plan or test suite.
- Analogy time: class vs object, test plan vs test run
 - The test plan is the structure, but you need to actually execute
- During the test run, the tester manually (or automatically) executes each test case and sets the status

Possible Statuses

- PASSED – Completed with expected result
- FAILED – Completed but unexpected result
- PAUSED – Test paused in middle of execution
- RUNNING – Test in the middle of execution
- BLOCKED – Cannot be completed because precondition not fulfilled
- ERROR – Problem with running test itself

Defects

- If the test case fails, a defect should be filed
 - Unless the test case has already failed, of course.
 - You don't need to re-file a duplicate of
- We will talk about filing defects on the next lecture

Creating a test plan...

- Start top-down: what is a good way to subdivide the system into features (test plans)?
- For a given feature (test plan), what aspects do I want to test?
- For each aspect, what test cases do I want that will hit different equivalence classes / success or failure cases / edge or corner cases / etc.?
- How deep should I go down?
- Test cases should be independent of each other, and reproducible!

Traceability Matrix

- Consider:
 - One test case may test multiple requirements
 - One requirement may be tested by multiple test cases
 - It's a complex many-to-many relationship!
- **Traceability Matrix:** table that describes the relationship between requirements and test cases
 - Keeps track how requirements are enforced throughout software development
 - Can tell us where we are missing test coverage, or have superfluous tests

Good Traceability Matrix Example

REQ1: TEST_CASE_1, TEST_CASE_2

REQ2: TEST_CASE_3

REQ3: TEST_CASE_4, TEST_CASE_7

REQ4: TEST_CASE_5, TEST_CASE_9

REQ5: TEST_CASE_6, TEST_CASE_10

- *All requirements have at least one test case associated with them; all test cases map to a requirement.*

Problematic Traceability Matrix 1

REQ1: TEST_CASE_1, TEST_CASE_2

REQ2:

REQ3: TEST_CASE_4, TEST_CASE_7

REQ4: TEST_CASE_5, TEST_CASE_9

REQ5: TEST_CASE_6, TEST_CASE_10

- *No test case is testing requirement 2!*

Problematic Traceability Matrix 2

REQ1: TEST_CASE_1, TEST_CASE_2

REQ2: TEST_CASE_3

REQ3: TEST_CASE_4, TEST_CASE_7

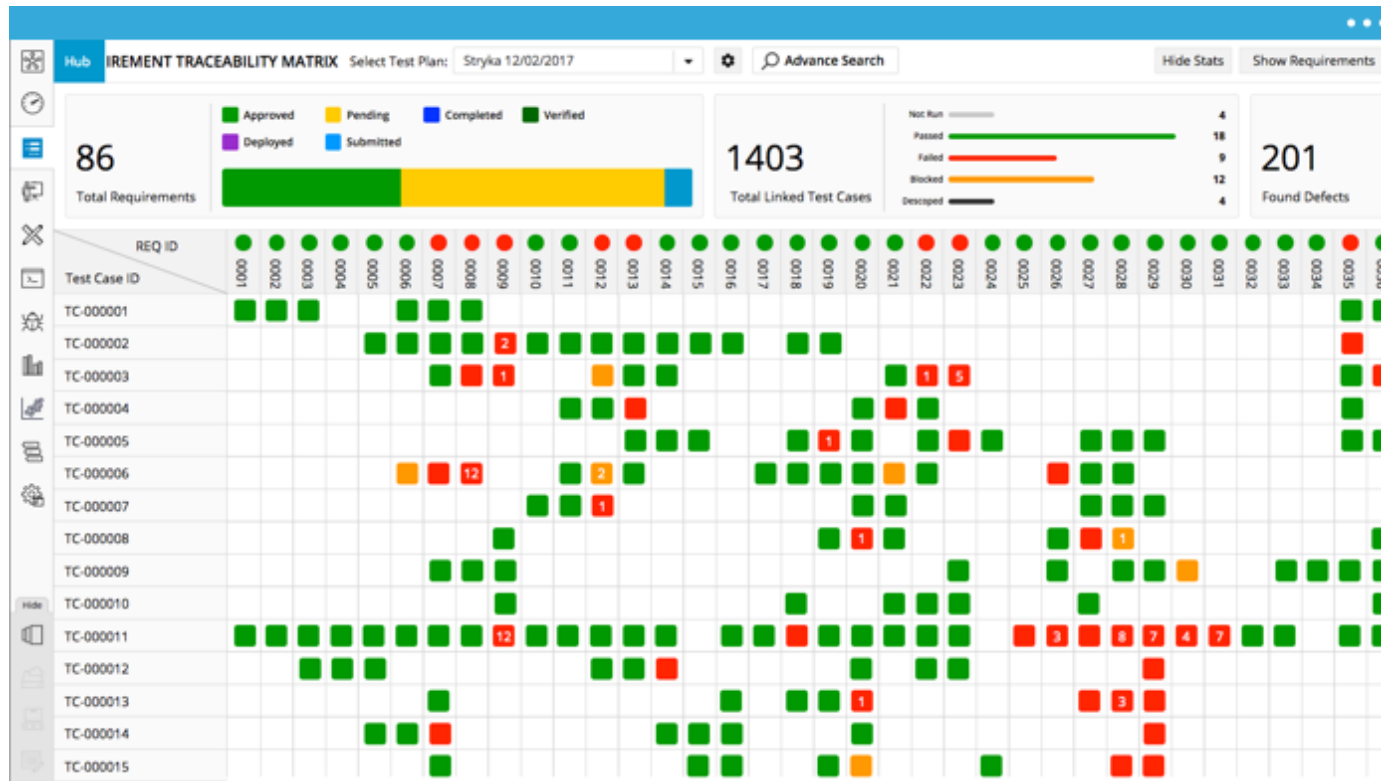

REQ4: TEST_CASE_5, TEST_CASE_9

REQ5: TEST_CASE_6, TEST_CASE_10

?????: TEST_CASE_11

- *What is test case 11 checking?*

Traceability Matrix in Actual Matrix Format

Now Please Read Textbook Chapters 6 and 8

- In particular, read Chapter 8 carefully since that's mostly what you will be doing for our first in-class exercise on 9/11.
